

Tackle water damage with Dantherm Group at BDMA

Dantherm Group will offer support and advice, as well as showcasing several pieces of their key mobile drying equipment to tackle water damage in properties, at this year's British Damage Management Association (BDMA) conference.

With the United Kingdom having been hit by two huge hurricanes in 2017, resulting in flooding across the country, Dantherm Group are in a unique position of being able to offer a multitude of drying solutions using state-of-the-art technology resulting from years of experience in the HVAC market.

Among the machines we will be presenting at the show is Aerial's AERCUBE series. This outstanding suction

and pressure drying system uses innovative, modular, stackable components to create the exact drying system required for the job in hand. Offering multiple configurations these units are available in your corporate colours and brand necessities.

The system comprises of side channel blowers, multi-stage adjustable turbines, water separators, filter systems, sound absorbers with a new edition of the AD 40 and AD 740 dehumidifiers, all of which are widely used in the water damage restoration industry. The Aerial units are extremely popular due to their intelligent eDRY® electronic systems, and can be combined and stacked safely with all other products in the AERCUBE series with multiple choices of grip and carry options.

Aerial's floor standing ASE 300 desiccant dehumidifier is another product on display at this year's conference. The ASE 300 is clad in a strong and sturdy housing with a unique built-in adjustable hygostat. This means that the unit is adjustable no matter where it is being used making it ideally suited for drying after water damage as well as for various other applications.

Also at the show will be Dantherm's CDT refrigerant dehumidifiers which are specifically designed for the restoration and flood drying markets. The CDT offers quick and easy control for both damage service and insurance companies. They are renowned for their user-friendliness, superior digital controls and are designed for easy handling and transportation.

Dantherm Group is a leading provider of climate control products and solutions made up of companies across Europe including Aerial, Calorex, Master Climate Solutions and Dantherm and the group have more than 60 years of experience in designing and manufacturing high quality and energy efficient equipment.

“Our aim at this year's event is to give people a greater understanding of the range of mobile drying equipment we can now offer.”

Speaking ahead of the event, which takes place on the 22 and 23 November at the Crowne Plaza Hotel in Stratford upon Avon, Sales Manager for Mobile Equipment, Rae Major said: “We are very excited to be part of this year's BDMA conference.

“As part of the Dantherm Group we can provide drying solutions for every application. Our aim at this year's event is to give people a greater understanding of the range of mobile drying equipment we can now offer. Whatever the problem is we can provide the answer, no matter how big or small a job.”
